

Game Rental Application

Team members: Bogdan TATU, Raul SARBU

General Description:

This application aims to help people that are passionate in computer games and providers alike by facilitating the buying or rental process of the games.

Registration (for both customers and providers):

The user needs to register by selecting the role of the customer or the provider. Both require a user and a password.

Provider:

The provider needs to log in.

After logging in he will see a menu with lists.

One of the lists shows him the game he chose to:

- Rent
- Sell

For each game he can see the time remaining of the offer.

He can choose if he wants to modify the price, add a discount, or remove it entirely.

Every entry on the list should contain title, picture, price (and optionally discount).

Other lists will show him the total customers, the new customers this month/week/day, the games that were sold/rented.

Customer:

The customer needs to log in.

After logging in he will see a menu with lists.

One list will show him various games.

By selecting the desired game he will see all the providers renting out/selling that game, sorted by price, and also seeing a brief description and user rating.

Another list shows him all the games he purchased and the remaining time available for him to play if he chose to rent them.

Another list shows him the history of his transactions.
